ABILITIES

HTML 5
CSS 3
Bootstrap
JavaScript (ECMAScript 6)

Angular
VueJS
Ionic

NodeJS
TypeScript
Java (Spring Boot)
C# (Net Core, Net Framework 4.5)
Visual Basic
Xamarin

SQL Server
Oracle
MongoDB

Git/ GitLab / GitHub
Team Foundation
Azure DevOps

Docker
AKS (Azure Kubernetes Services)
Service Bus
Key Vault/ Storage Accounts

EXPERIENCE

Full Stack Developer (04-02-2020 – 22-07-2022)

CORPORACIÓN MILLENIUM

Facel Web: Web site in Vuejs, to create “facturación electrónica”. In this Project, A coworker and I had to migrate a web site from AngularJS to Vuejs, where I created new functionality and add new crud in the Backend where we used an Api Rest in Net Framework. We had to make login to generated a JWT for being able to consume all the endpoints in the Api Rest. Technologies used: for Front End bootstrap, VueJs and for Back End C# with Entity Framework and SQL Server.

Facel App: App mobile for Android and iOS, to create “facturación electrónica”. In this Project, A coworker and I had to create an app mobile with Xamarin Forms, where I created part of the same functionality of the Web Site and consume the Api Rest in Net Framework. In this app, we used JWT to authorized all the endpoints in the Api rest where we had to make a login to get it. Technologies used: Xamarin Forms and C#.

Software Developer (26-07-2022 – Current Job)

PFC TI GRUPO PROMERICA

Account Statement: Web site in Angular, to generate “Estados de Cuenta”. In this Project, I have created new functionality in some components of Angular. Moreover, I have to consume an Api Rest in NodeJs, this project has an microservices structure where a coworker and I have fixed some bugs in some of the services. I have used Queue with Service Bus, Docker Swarm as infrastructure, Key Vault to save sensible data and Blob Storage to save images and templates in the microservices of this project. Technologies used: for Front End bootstrap, Angular and for Back End NodeJS and MongoDB.

Correspondence: Api Rest in Node with structure of microservices, to send Emails and SMS by Sendgrid and Twilio. In this Project, I have created and configurated new functionality in some services in NodeJs and in the Api Rest, where I used Queue with Service Bus, Kubernetes (AKS) as infrastructure and Key Vault to save sensible data. Technologies used: for Back End NodeJS and MongoDB.

Costumers: Api Rest in C#, to consult information from Costumers. In this Project, I have created new functionality in an API Rest C# with Entity Framework to connect to the Data Base. Moreover, a coworker and I have added some unit test to the Api Rest. Technologies used: for Back End C# and SQL Server.
